Key Insights

- Engineering is the largest department, with 6,686 employees, making it the strongest workforce concentration by department.

- Ohio is the dominant state location, with 18,025 employees, indicating a highly concentrated geographic workforce.

- The workforce is predominantly Headquarters-based (75.25%), while Remote employees account for 24.75%.

- Gender representation is relatively balanced: Male employees account for 50.81%, Female employees 46.46%, and Non-Conforming employees 2.72%.

- White employees form the largest race category at 6,328 employees, followed by Two or More Races, Black or African American, and Asian employees.

- Hiring remains broadly stable at around the 1,000–1,150 employee range in most years after 2000, with 2018 showing the highest annual hiring count (1,147)

Business Recommendations

• Review engineering workforce capacity regularly because Engineering represents the largest department and is likely critical to operational delivery.

valuate the geographic concentration in Ohio and consider whether workforce diversification across other states would improve talent access and operational resilie

• Use role-level performance, collaboration, and retention measures when considering future expansion of remote work.

• Continue monitoring diversity representation at department and job-level granularity rather than relying only on overall workforce percentages.

• Use historical hiring patterns as a baseline for annual workforce planning and recruitment scenarios.
